

CLAIMS

1. A scrip-type bag (1), consisting of at least two layers (E_1 and E_2) of material, of the same shape and same dimensions, that are superposed and secured to one another along their periphery (2-5) so as together to define two pockets (P_1 and P_2) that can be accessed via a central opening (7), said bag having a longitudinal direction and a transverse direction, characterized in that said opening (7) is made in the longitudinal direction of the bag (1) and in that said material forming at least one of the layers (E_1 and E_2) is a fabric that can stretch in the machine direction and/or in the cross direction.

2. The bag (1) as claimed in claim 1, characterized in that said opening (7) is made in said periphery (3).

3. The bag (1) as claimed in claim 1 or 2, characterized in that the extension of said stretch fabric is different in the machine direction and in the cross direction, and in that, in the bag, the direction of greater extension is used transversely.

4. The bag (1) as claimed in any one of the preceding claims, characterized in that said fabric has a weight per m^2 of between approximately 60 and 400 g/m^2 .

5. The bag (1) as claimed in any one of the preceding claims, characterized in that at least one strip (8) of inelastic material is provided along the periphery (3-5) of said layers (E_1 and E_2).

6. The bag as claimed in claim 5, characterized in that said strip of inelastic material does not affect the transverse zone (Z) of the bag containing said opening (7).

7. The bag (1) as claimed in any one of the preceding claims, characterized in that it consists of a single piece of fabric folded over on itself so as to form two superposed thicknesses (E_1 and E_2) of fabric, said two

thicknesses (E_1 and E_2) being sewn (6) right along their free edges, an opening (7) nevertheless being provided in the middle of the side (3) opposite the side (2) forming the fold line.

5 8. The bag (1) as claimed in any one of the preceding claims, characterized in that it has a rectangular shape and, when empty, a length of between approximately 70 and approximately 100 cm and a width of between approximately 40 and approximately 60 cm.

10 9. The bag (1) as claimed in any one of the preceding claims, characterized in that, when empty, said opening (7) has a length between approximately 10 and approximately 20 cm.

15 10. The bag (1) as claimed in any one of the preceding claims, characterized in that a visual or tactile reference means (9) is associated with said opening (7).
